***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

***Claim Rejections - 35 U.S.C. § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 11 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Regarding claim 11, Applicant is claiming "packet's packet header information

Art Unit: 2664

or *internal information* used within a service provider's network" is unclear as to what Applicant is referring to in his claim limitation.

***Allowable Subject Matter***

4. Claims 1-10, 12 and 13-42 are allowed over prior art.

5. The following is a statement of reasons for the indication of allowable subject matter:

Although the combined cited art, Zak et al, Muller et al and Noll et al, teaches pipeline states in series associated with memory devices used to store packet data, the art fails to teach or suggest at least one a series of pipeline stages having an interface that receives packet size information and an interface that receives input capacity information and a comparison logic coupled to both interfaces, determining within a stage associated with pipeline, with packet header information, input capacity for packet, comparing with in a stage associated with pipeline, input capacity with packet size, and indicating from a pipeline stage whether a packet is conforming or non-conforming based up comparison, a second pipeline stage that receives one or more parameters that describe a first input rate so that it can be determined if the sending of a first packet conforms to first input rate, pipeline stage receives a second input flow identifier that points to a second memory location.
